

Each artist is born into this world with a small seed of talent. Through our lives, we cultivate this seed and grow it into creativity and our artistic voice. Art is a special concept because it encases diverse material, has a spectrum of meaning and representation and allows individuals to express and share their creative voice with the world. My art journey started at a young age with drawing and painting and flourished into something more defined.

I hold a special place in my heart for painting, and I have since made room for a fairly new interest: graphic design. I love many art forms, but my primary focus lies in painting and graphic design, with photography as a hobby. I have been taking pictures from the time I was first allowed to possess a cellphone. While photography is not my main area of focus, I still enjoy creating beautiful moments. In my painting and photography work, I am drawn to the natural world. I enjoy landscapes, vegetation, flora and other natural themes. My style varies from slightly abstract to graphic to more realistic. I enjoy exploring and discovering new mediums and new ways to create art.

My graphic work tends to be flat and simple in style, much like many of my paintings. I enjoy clean, simple designs that are easily readable and recognizable to the viewer. I sometimes utilize illustrations in this style in my graphic work to further push the design. I am a strong conceptual visualizer and strive to create work that is of the utmost quality. I will continue to create quality designs and utilize the skills that I have acquired from other art mediums to further develop creative solutions.
